- Creating an elastic beanstalk application

The screenshot displays the AWS Elastic Beanstalk console interface. The left-hand navigation pane includes links for 'Environments', 'Applications' (which is currently selected), and 'Change history'. Below these, a section titled 'Recent environments' lists 'Testwebserver-env'. The main content area, titled 'All applications', features a search bar with the placeholder text 'Filter results matching the display values'. To the right of the search bar are 'Actions' and 'Create a new application' buttons. A table below the search bar lists the applications. The table has columns for 'Application name', 'Environments', 'Date created', 'Last modified', and 'ARN'. One application is listed: 'test_webserver' with environment 'Testwebserver-env', created on '2021-01-27 17:54:27 UTC+0530', last modified on '2021-01-27 17:54:27 UTC+0530', and ARN 'arn:aws:elasticbeanstalk:ap-south-1:883091692535:application/test_webserver'. The bottom of the image shows the Windows taskbar with various application icons and the system clock indicating 8:52 AM on 1/28/2021.

Application name	Environments	Date created	Last modified	ARN
test_webserver	Testwebserver-env	2021-01-27 17:54:27 UTC+0530	2021-01-27 17:54:27 UTC+0530	arn:aws:elasticbeanstalk:ap-south-1:883091692535:application/test_webserver

- Creating an environment with sample app python

- Accessing the deployed application using the url
